WinCan V8

WinCan V8 transforms raw data into the intelligence you need to make maintenance decisions. Its intuitive interface grants easy access to information while enforcing consistent data entry. Single-click video and still image capture, plus annotation and measurement tools, ensure every observation is robustly documented. Sophisticated search functionality lets you sort observations by location, type and severity, as well as perform statistical analysis.

WinCan V8 also makes sharing intelligence easy. It generates customizable reports that combine information, graphics and images for rapid comprehension. And it comes with a distributable freeware viewer that allows anyone to review your inspections using the familiar WinCan interface.

Section Pane: Navigate among archived inspections, or create a new inspection. Clicking a record brings up header details.

Video Console: Studio controls give you flexibility without complexity, allowing you to view real-time footage or stored video.

Observation Pane: View, sort and filter all observations for the inspection selected in the section pane.

Reporting: Generate clean, comprehensible custom reports that incorporate data tables, graphs, images, side-scans and schematics. Generate large PDF reports with the click of a button and automatically attach them to email.

Inspect Analyze Report

Technician

- Access all sections and observations on a single screen.
- Rely on input validation, required field warnings and header pre-population to capture comprehensive data rapidly.
- Perform unlimited inspections on an asset. Playback and record video easily with DVD-style controls.
- Generate reports in batch or on the fly. Effortlessly integrate side-scan technology.

Engineer

- Find sections, inspections and observations quickly using search and filter utilities.
- When necessary, edit inspections as you review.
- Rapidly create reports required for regulatory paperwork and work order generation.
- Effortlessly correlate sections and observations to GIS and side-scan data for rapid retrieval and review.

Supervisor

- Communicate maintenance needs by distributing inspections on CD with a freeware viewer.
- Generate comprehensible reports to justify budget requests.
- Support inspection coding standards such as PACP, MACP and WRG—and meet CDMO guidelines.
- Navigate easily among inspection, GIS and work order data to understand maintenance costs and priorities.
- Rest assured that your inspection reporting software is open, compatible, and side-scan ready.

Mapping Options

- Pre-populate inspections directly from GIS map data, eliminating manual data entry.
- Perform color-coded tracking of multiple inspection crews.
- Pinpoint assets using robust search tools, or use WinCan GIS Query to find a map feature by clicking the corresponding WinCan record (or vice versa).
- Use filtered WinCan datasets as the basis for plotting coordinating lines.
- Import coordinates wirelessly from any Bluetooth-equipped GPS.

Digital Video Options

- Perform MPEG-4/24 encoding in real time using PCI hardware, or offline using software.
- Pause/restart recording within a single file.
- Index digital video to each observation for easier navigation.
- Convert existing WinCan projects from analog video tape to MPFGs, with auto-indexing from the video counter.
- Use jog/shuttle hardware to review inspection footage more efficiently.

DigiSewer Option

- Triple the speed of your inspection by crawling at 70 fps without stopping to pan, tilt or zoom.
- Capture consistent detail from every square inch of pipe wall.
- Analyze inspection results in a fraction the time video requires.
- Leverage your existing ROWER crawler platform to reduce investment and enhance versatility.
- Create bidirectional links between scan regions and WinCan observations.

Add-On Modules

Support

- 
Annual Support Contract
 Includes unlimited phone and email support, remote diagnostics, free maintenance releases, and upgrade and training discounts.
- 
Per-Incident Support
 A single issue is addressed by phone for a flat fee.

Training & Consulting

Developer-trained WinCan specialists are available to perform on-site training addressing:

- 
WinCan V8 Certification
- 
PACP, MACP & WRc
- 
Software Customization
- 
Data Management
- 
Inventory Setup
- 
Hardware Upgrades
